Analysis of the Economic Impact and Return on Investment of Education

THE ECONOMIC VALUE OF FULLERTON COLLEGE

July 2018
Executive summary

Fullerton College creates value in many ways. The college plays a key role in helping students increase their employability and achieve their individual potential. It provides students with the skills they need to have fulfilling and prosperous careers. Further, it supplies an environment for students to meet new people, increase their self-confidence, and promote their overall health and well-being.

The value of Fullerton College influences both the lives of students and the county economy. The college serves a range of industries in Orange County, supports local businesses, and benefits society as a whole in California from an expanded economy and improved quality of life. The benefits created by Fullerton College even extend to the state and local government through increased tax revenues and public sector savings.

This study investigates the economic impacts created by Fullerton College on the business community and the benefits that the college generates in return for the investments made by its key stakeholder groups—students, taxpayers, and society. The following two analyses are presented:

- Economic impact analysis
- Investment analysis

All results reflect student and financial data for fiscal year (FY) 2016-17. Impacts on the county business community are reported under the economic impact analysis. Results are measured in terms of added income. The returns on investment to students, taxpayers, and society are reported under the investment analysis. Both analyses are described more fully in the following sections.
Economic impact analysis

Fullerton College promotes economic growth in Orange County in a variety of ways. The college is an employer and buyer of goods and services, and the living expenses of students benefit local businesses. In addition, Fullerton College is a primary source of education to Orange County residents and a supplier of trained workers to county industries.

**OPERATIONS SPENDING IMPACT**

Fullerton College is an important employer in Orange County. In FY 2016-17, the college employed 1,260 full-time and part-time faculty and staff. Of these, 64% lived in Orange County. Total payroll at Fullerton College was $104.2 million, much of which was spent in the county for groceries, rent, dining out, clothing, and other household expenses.

Fullerton College is itself a large-scale buyer of goods and services. In FY 2016-17, the college spent $69.1 million to cover its expenses for facilities, professional services, and supplies.

Fullerton College added $152 million in income to the county during the analysis year as a result of its day-to-day operations. This figure represents the college’s payroll, the multiplier effects generated by the spending of the college and its employees, and a downward adjustment to account for funding that the college received from state and local sources. The $152 million in added income is equivalent to supporting 1,809 jobs.

**CONSTRUCTION SPENDING IMPACT**

Fullerton College commissioned contractors to build or renovate a number of facilities during the analysis year. The quick infusion of income and jobs that occurred in the county economy as a result of this construction spending is only considered short-term due to the one-time nature of construction projects. Nonetheless, the construction spending had a substantial impact on the county economy in FY 2016-17, equal to $4.4 million in added income for Orange County, which is equivalent to supporting 40 jobs.

**STUDENT SPENDING IMPACT**

Around 31% of students attending Fullerton College originated from outside the county in FY 2016-17, and some of these students relocated to Orange County to attend Fullerton College. These students would not have come to the county if...
the college did not exist. In addition, a number of in-county students would have left the area for other educational opportunities if not for the existence of Fullerton College. While attending the college, these relocated and retained students spent $40.4 million to purchase groceries, rent accommodation, pay for transportation, and so on. A significant portion of these expenditures occurred in the county, generating $47.7 million in added income in the county economy during the analysis year, which is equivalent to supporting 801 jobs.

**ALUMNI IMPACT**

The education and training Fullerton College provides for county residents results in the greatest impact. Since the college was established, students have studied at Fullerton College and entered the county workforce with new skills. Today, thousands of former students are employed in Orange County.

During the analysis year, past and present students of Fullerton College generated $589.4 million in added income for the county. This figure represents the higher earnings that students earned during the year, the increased output of the businesses that employed the students, and the multiplier effects that occurred as students and their employers spent money at other businesses. This $589.4 million in added income is equivalent to supporting 7,676 jobs.

**TOTAL IMPACT**

The overall impact of Fullerton College on the local business community during the analysis year amounted to $793.6 million in added income, equal to the sum of the operations spending impact, the construction spending impact, the student spending impact, and the alumni impact (Table 1). The $793.6 million in added income was equal to approximately 0.3% of the GRP of Orange County.

The total impact is also expressed in terms of the jobs supported by the added income; they are calculated by jobs-to-sales ratios specific to each industry. Overall, the $793.6 million impact supports 10,326 jobs.

A portion of the total $793.6 million is broken out into an industry-by-industry impact ordered by added income. Table 2 outlines the top industries impacted by Fullerton College. Because industries have different jobs-to-sales ratios, the associated jobs supported by Fullerton College differ by impact. Nonetheless, these are impacts that would not have been generated without the college’s presence.

Investment analysis

Investment analysis is the process of evaluating total costs and measuring these against total benefits to determine whether or not a proposed venture will be profitable. If benefits outweigh costs, then the investment is worthwhile. If costs outweigh benefits, then the investment will lose money and is considered unprofitable. This study considers Fullerton College as an investment from the perspectives of students, taxpayers, and society. The backdrop for the analysis is the entire California economy.

STUDENT PERSPECTIVE

In FY 2016-17, Fullerton College served 27,042 credit students and 7,564 non-credit students. In order to attend college, students paid for tuition, fees, books, and supplies. They also took out loans and will incur interest on those loans. Additionally, students gave up money that they would have otherwise earned had they been working instead of attending college. The total investment made by Fullerton College’s students for FY 2016-17 amounted to a present value of $113.5 million, equal to $31.1 million in out-of-pocket expenses (including future principal and interest on student loans) plus $82.4 million in forgone time and money.

In return for their investment, Fullerton College’s students will receive a stream of higher future earnings that will continue to grow throughout their working lives. As shown in Figure 2, mean earnings levels at the midpoint of the average-aged worker’s career increase as people achieve higher levels of education. For example, the average associate degree completer from Fullerton College will see an increase in earnings of $11,300 each year compared to someone with a high school diploma or equivalent working in California. Over a working lifetime, this increase in earnings amounts to an undiscounted value of approximately $485,900 in higher earnings.

The present value of the higher future earnings that Fullerton College’s students will receive over their working careers is $801.5 million. Dividing this value by the $113.5 million in present value student costs yields a benefit-cost ratio of 7.1. In other words, for every dollar students invest in Fullerton College in the form of out-of-pocket expenses and forgone time and money, they receive a cumulative of $7.10 in higher future earnings. The average annual rate of return for students is 19.2%. This is an impressive return, especially when compared to the 30-year average 10.1% return to the U.S. stock market (Figure 2).
TAXPAYER PERSPECTIVE

Fullerton College generates more in tax revenue than it takes. These benefits to taxpayers consist primarily of taxes that the state and local government will collect from the added revenue created in the state. As Fullerton College students earn more, they will make higher tax payments. Employers will also make higher tax payments as they increase their output and purchase more supplies and services. By the end of the FY 2016-17 students' working careers, the state and local government will have collected a present value of $482.6 million in added taxes.

Benefits to taxpayers also consist of the savings generated by the improved lifestyles of students and the proportionally reduced government expenditures. Education is statistically correlated with a variety of lifestyle changes that generate taxpayer savings across three main categories: 1) health, 2) crime, and 3) unemployment. Improved health habits lower the students' demand for national health care services. Students are also less likely to commit crimes, so the demand for law enforcement and criminal justice services is reduced (study references are available in the main report). Students are also more employable, so the demand for welfare and unemployment benefits, such as earnings assistance and welfare benefits, is reduced. For a list of study references to these statistical benefits, please contact the college for a copy of the main report. All of these benefits associated with increased education will generate a present value of $35.7 million in savings to state and local taxpayers.

Total benefits to taxpayers equal $518.2 million, equal to the sum of the added taxes and public sector savings. Comparing this to the taxpayer costs of $138.2 million—equal to the funding that Fullerton College received from the state and local government during the analysis year—yields a benefit-cost ratio of 3.7. This means that for every dollar of public money invested in Fullerton College, taxpayers receive a cumulative value of $3.70 over the course of the students' working lives. The average annual rate of return is 8.7%, a solid investment that compares favorably with other long-term investments in both the private and public sectors.

SOCIAL PERSPECTIVE

Society as a whole within California benefits from the presence of Fullerton College in two major ways. The first and largest benefit that society receives is an increased state economic base. As discussed in the previous section, the higher student earnings and increased business output occurs across the state. This raises prosperity in California and expands the economic base for society as a whole.

Benefits to society also consist of the savings generated by the improved lifestyles of students. Similar to the taxpayer section above, education is statistically correlated with a variety of lifestyle changes that generate social savings. Note that these costs are avoided by the consumers, and are distinct from the costs avoided by taxpayers outlined above. Health savings include avoided medical costs associated with smoking, alcoholism, obesity, drug abuse, and mental disorders. Crime savings
include reduced security expenditures and insurance administration, lower victim costs, and reduced criminal justice system expenditures. Unemployment savings include the reduced employer contributions towards unemployment claims. For a list of study references to these statistical benefits, please contact the college for a copy of the main report.

Figure 3 shows the present value of the higher earnings and social savings that will occur in California over the working lifetime of the FY 2016-17 student population at Fullerton College. Higher earnings amount to a present value of $6.7 billion due to the increased lifetime earnings of students and associated increases in business output. Social savings amount to $84.5 million, the sum of health, crime, and unemployment savings in California. Altogether, total benefits to society equal $6.8 billion (in present value terms).

Society invested a present value of $282.8 million for FY 2016-17 Fullerton College educations. This includes all expenditures by Fullerton College, all student expenditures, and all student opportunity costs. For every dollar of this investment, society as a whole in California will receive a cumulative value of $24.10 in benefits, equal to the $6.8 billion in benefits divided by the $282.8 million in costs. These benefits will occur for as long as Fullerton College’s FY 2016-17 students remain employed in the state workforce.

SUMMARY OF INVESTMENT ANALYSIS RESULTS

Table 3 presents the results of the investment analysis for all three of Fullerton College’s major stakeholder groups—students, taxpayers, and society. As shown, students receive great value for their educational investment. At the same time, the investment made by state and local taxpayers to the college creates a wide range of benefits to society and returns more to government budgets than it costs.

* The rate of return is not reported for the social perspective because the beneficiaries of the investment are not necessarily the same as the original investors.
Conclusion

The results of this study demonstrate that Fullerton College creates value from multiple perspectives. The college benefits local businesses by increasing consumer spending in the county and supplying a steady flow of qualified, trained workers into the workforce. It enriches the lives of students by raising their lifetime earnings and helping them achieve their individual potential. It benefits state and local taxpayers through increased tax receipts across the state and a reduced demand for government-supported social services. Finally, it benefits society as a whole in California by creating a more prosperous economy and generating a variety of savings through the improved lifestyles of students.

ABOUT THE STUDY

Data and assumptions used in the study are based on several sources, including the FY 2016-17 academic and financial reports from Fullerton College, industry and employment data from the U.S. Bureau of Labor Statistics and U.S. Census Bureau, outputs of Emsi’s Multi-Regional Social Accounting Matrix model, and a variety of studies and surveys relating education to social behavior. The study applies a conservative methodology and follows standard practice using only the most recognized indicators of investment effectiveness and economic impact. For a full description of the data and approach used in the study, please contact the college for a copy of the main report.

Emsi is a leading provider of economic impact studies and labor market data to educational institutions, workforce planners, and regional developers in the U.S. and internationally. Since 2000, Emsi has completed over 1,800 economic impact studies for educational institutions in four countries. Visit www.economicmodeling.com for more information about Emsi’s products and services.
